<http://ipl.xjtlu.edu.cn/>

关于图像质量评价问题的 Special Session

■ 动机

- ◆ 对于CT、PET/SPECT而言，图像质量评价是一个多层次的话题；
- ◆ 对于Tomographic的成像算法层面、以及医生临床诊断层面，我们有两个话题：
 - ✓ Task-specific Image Quality Assessment (IQA), e.g., Hotelling Observer
 - ✓ General IQA, including FR(full reference) IQA, e.g., SSIM, or BIQA (Blind IQA), e.g., M3

关于图像质量评价问题的 Special Session

□ 动机

- General IQA和Task-specific IQA有很大的不同，值得研究其中的关系，并且构建更好的模型。

正常剂量重建参考图像

Qiong Xu, et al, "Low-dose X-ray CT Reconstruction via Dictionary Learning", IEEE TMI, vol. 31, 2012.

对图像噪声抑制较小
SSIM=0.8583 , $\beta=15000$

对图像噪声抑制明显
SSIM=0.8834 , $\beta=40000$

IIPPR®

INFORMATION ENGINEERING, XJTU

INSTITUTE OF IMAGE PROCESSING & PATTERN RECOGNITION

<http://gr.xjtlu.edu.cn/web/xqmou>
<http://ipl.xjtlu.edu.cn/>

关于图像质量评价问题的 Special Session

■ 我们方案之一：

- ◆ 建设一个CT图像数据库，该数据库包括：
 - ✓ 提供一定数量、在不同剂量水平下扫描的投影数据；
 - ✓ 采用各种重建方法、各种重建参数选择来重建图像；
 - ✓ 引入放射科医生对每一个图像进行主观质量评价；
 - ✓ 邀请非专业人士对每一个进行主观质量评价；
 - ✓ 最终形成一个CT图像的主观质量评价数据库，包括不同的评价方式。
- ◆ 数据库将对学术研究开放使用。
- ◆ 欢迎国内单位提供数据，参加到数据库建设中，提升学术影响力。

国家天元数学西北中心2019主题活动年活动公告

日期 : 2019-01-29 点击 :

经国家天元数学西北中心学术委员会讨论决定，国家天元数学西北中心2019年度的活动主题为“数据科学与医疗健康”。主题活动年旨在围绕国家在医疗健康领域的重大需求，推动数学、统计学等学科在智能诊断、医疗数据分析等领域的交叉应用与发展，以期培育医学与人工智能应用数学新方向，并在相关研究中取得重要成果。

为更好地组织开展主题活动年，中心聘请了主题首席科学家、专家委员会及组织委员会。主题科学家主持本年度所有科学活动。专家委员会协助主题科学家审定活动计划、遴选相关活动组织人、演讲人等。组织委员会负责组织落实各项活动安排。各委员会名单如下：

首席科学家：徐宗本院士（西安交通大学）

<http://ipl.xjt.edu.cn/>

三、前沿学术交流

- **专题研讨班**：聚焦主题中的前沿热点问题组织专题研讨班，邀请相关专家“以一个单元一位专家”的形式介绍专题成果，与研讨班学员交流并研讨最新研究进展。每期研讨班预计人数20-50人。举办地点为西安交通大学，拟在以下时间段的3-5天开展。目前已确定的研讨班信息包括：

时间段	专题研讨班名称	负责人	工作单位
3月25-29日	典型疾病智能诊断主流数学方法	孔德兴	浙江大学
4月11-14日 (11日报道)	基于动力学不稳定性理论的健康临界状态评估方法	肖燕妮	西交大
6月24-28日	智能诊断可解释性和安全性问题	王学钦	中山大学
	超声标准化成像的智能化方法	黄庆华	西工大
9月26-30日	医学影像分析建模和基础算法新进展	杨孝平	南京大学
	多模态智能医疗影像分析	孙剑	西交大
11月11-15日	医学图像质量评价和面向诊断目标的图像重建	牟轩沁	西交大
11月29-30日	典型疾病智能诊断新进展	中心组织委员会	西交大

研讨会时间
已调整为12
月12-15号。

图像/视频质量感知模型的研究

人的大脑可以非常容易的判断出具有更好质量的图像（即便不用观察原始图像）

计算机如何判断出具有更好质量的图像？？？（传统的MSE被证明不能很好地表达视觉系统的感知能力）

图像/视频质量感知模型能够为图像处理和计算机视觉领域的几乎所有科学问题提供优化目标，有着广泛的应用前景。

$$MSE(x, y) = \frac{1}{M * N} \sum_{i=1}^N \sum_{j=1}^M (x(i, j) - y(i, j))^2$$

LOG的计算理论意义

- Marr认为是用于提取图像边缘，而且通过该边缘可以重建原始图像，从而检测图像的有用信息；
- 近期的一项研究指出，这种圆对称感受野可以用于白化信号（消除冗余）。

$$\mathbf{z} = \underbrace{\mathbf{U} \Lambda \mathbf{U}^T}_{=\mathbf{W}} \mathbf{x} = \mathbf{Wx}$$

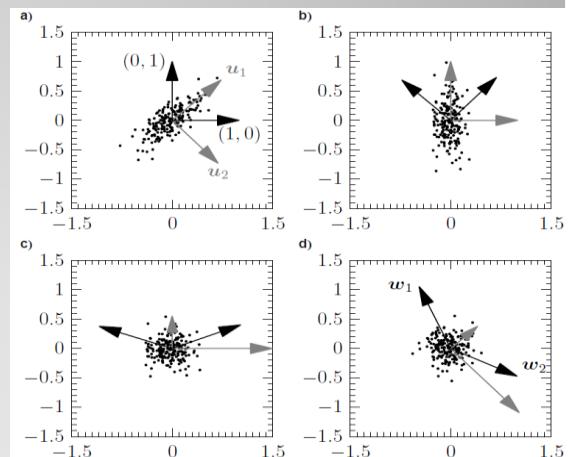

$$z_k = \mathbf{w}_k^T \mathbf{x}, \quad k = 1, \dots, K.$$

Atick JJ, Redlich AN (1992) What does the retina know about natural scenes? Neural Computation 4(2):196–210

$$\Lambda = \begin{bmatrix} \frac{1}{\sqrt{\text{var}(y_1)}} & 0 & \cdots & 0 \\ 0 & \frac{1}{\sqrt{\text{var}(y_2)}} & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & \frac{1}{\sqrt{\text{var}(y_K)}} \end{bmatrix}$$

圆对称感受野可以用
来白化自然图像

全参考图像质量评价模型 Based on Normalized LOG Signals

1. The equivalence of the mutual information between the reference image and distorted image in the LOG domain and in the oriented Laplacian pyramid domain (OLP). In this oriented Laplacian pyramid domain, we can represent natural images with Gaussian Scale Mixture model, and model the distortion procedure as a decay factor and an additive noise, as in IFC.
2. The equivalence of the mutual information between r and d in the OLP domain, and the MSE between r and d in the divisive normalized OLP (DNT-OLP) domain. Following the work in IFC, this can be easily proved.
3. The equivalence of the MSE between r and d in the NLOG domain and in the DNT-OLP domain.

Perceptual Fidelity Aware Mean Squared Error

An MSE-like l2-norm distance metric

- 对MSE做一个简单的修改：增加一个测量结构的MSE算子 (by introducing a MSE of a structure measure)
 - Structure MSE, SMSE

$$\begin{aligned} \text{SMSE}(\mathbf{r}, \mathbf{d}) &= \frac{1}{N} \left(\|\mathbf{r} - \mathbf{d}\|_2^2 + \alpha \|S \cdot \mathbf{r} - S \cdot \mathbf{d}\|_2^2 \right) \\ &= \frac{1}{N} \left(\|\mathbf{r} - \mathbf{d}\|_2^2 + \alpha \|S \cdot (\mathbf{r} - \mathbf{d})\|_2^2 \right) \end{aligned}$$

$$\text{SMSE}(\mathbf{r}, \mathbf{d}) = \frac{1}{N} (\mathbf{r} - \mathbf{d})^T (\mathbf{I} + \alpha \mathbf{S}^T \mathbf{S})(\mathbf{r} - \mathbf{d})$$

$$\mathbf{M} = \mathbf{I} + \alpha \mathbf{S}^T \mathbf{S}$$

$$\gamma_i = 1 + \alpha \lambda_i$$

$\mathbf{S}^T \mathbf{S}$ eigenvalue: λ_i , $i=1,2,\dots,N$

\mathbf{M} eigenvalue : γ_i , $i=1,2,\dots,N$, we have:

IIPPR®

SCHOOL OF ELECTRONIC AND
INFORMATION ENGINEERING, XJTU

INSTITUTE OF IMAGE PROCESSING & PATTERN RECOGNITION

<http://gr.xjtlu.edu.cn/web/xqmou>

<http://ipl.xjtlu.edu.cn/>

Perceptual Fidelity Aware Mean Squared Error

An MSE-like ℓ_2 -norm distance metric

- SMSE是一个距离算子的充分必要条件:
- \mathbf{M} is semipositive definite (SPD)

$$\gamma_i = 1 + \alpha \lambda_i \geq 0 \quad i=1,2,\dots,N$$

When \mathbf{M} is SPD and symmetric, we can find a matrix \mathbf{P}

$$\mathbf{M} = \mathbf{P}^T \mathbf{P} \quad \text{SMSE}(\mathbf{r}, \mathbf{d}) = \frac{1}{N} \left\| \mathbf{P}(\mathbf{r} - \mathbf{d}) \right\|_2^2$$

The matrix \mathbf{P} can be viewed as a new feature extractor (a linear projection/transform) which is able to simultaneously measure the pixel-wise energy preservation and local neighborhood-wise image structure preservation. \mathbf{P} can also be viewed as a kernel to measure the similarity between \mathbf{r} and \mathbf{d} .

INFORMATION ENGINEERING, XJTU

INSTITUTE OF IMAGE PROCESSING & PATTERN RECOGNITION

<http://gr.xjtlu.edu.cn/web/xqmou>

<http://ipl.xjtlu.edu.cn/>

Perceptual Fidelity Aware Mean Squared Error

An MSE-like ℓ_2 -norm distance metric

- Two Issues:
 - Determining P and δ for SMSE become an IQA metric
 - The performance of the new metric?

There are many candidates in choosing P and determining δ , e.g., LOG (Laplacian of Gaussian), Gradient operator, etc.

$$S_d: \quad f = [1, -1]$$

$$S_l: \quad f = [0, 1, 0; 1, -4, 1; 0, 1, 0]$$

$$S_{log}: \quad f = G(i,j) * S,$$

$$S_g: \quad f = \sqrt{G_i^2(i,j) + G_j^2(i,j)}$$

<http://ipl.xjtlu.edu.cn/>

How Does SSIM Really Work?

$$\frac{2\mu_x\mu_y + C_1}{\mu_x^2 + \mu_y^2 + C_1} = 1 - \frac{(\mu_x - \mu_y)^2}{\mu_x^2 + \mu_y^2 + C_1} \quad \frac{2\sigma_{xy} + C_2}{\sigma_x^2 + \sigma_y^2 + C_2} \quad x_i - \mu_x = l_i$$
$$y_i - \mu_y = k_i$$

$$\frac{2\sigma_{xy} + C_2}{\sigma_x^2 + \sigma_y^2 + C_2} = \frac{2\sum_{i=1}^N l_i k_i \omega_i + C_2}{\sum_{i=1}^N l_i^2 \omega_i + \sum_{i=1}^N k_i^2 \omega_i + C_2}$$

$$= 1 - \frac{\sum_{i=1}^N (l_i - k_i)^2 \omega_i}{\sum_{i=1}^N l_i^2 \omega_i + \sum_{i=1}^N k_i^2 \omega_i + C_2}$$
$$\approx 1 - \frac{W \otimes (l_i - k_i)^2}{W \otimes (l_i^2 + k_i^2) + C_2}$$

Thus SSIM is equivalent to

$$\left(1 - \frac{(\mu_x - \mu_y)^2}{\mu_x^2 + \mu_y^2 + C_1}\right) \times \left(1 - \frac{W \otimes (l_i - k_i)^2}{W \otimes (l_i^2 + k_i^2) + C_2}\right)$$

基于CT图像质量的迭代重建框架

■ 研究背景

$$\mu_{\beta} = \arg \min_{\mu} \left\{ \left\| A\mu - b^{\delta} \right\|_2^2 + \beta \psi(\mu) \right\}$$

保真项 正则项

如何选择合适参数?

■ 已有方法

□ 偏差准则

需已知测量数据的噪声水平

$$F(\beta) = \left\| A\mu - b^{\delta} \right\|_2^2 - \beta^2$$

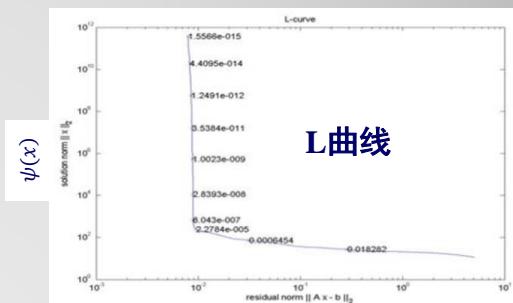

测量误差 噪声水平
造成图像过模糊

□ 广义交叉验证

$$GCV(\beta) = \sum_l \varpi_l ((A\mu^l(\beta)) - b_l)^2$$
$$\beta = \arg \min_x GCV(\beta)$$

极小化广义交叉函数有多解

□ L曲线

$$\|Ax - b^{\delta}\|_2^2$$

计算成本高

基于增强图像局部质量的迭代重建算法

■ 方法基础

传统的基于字典的迭代重建算法

$$\min_{\mathbf{x}, \boldsymbol{\alpha}_s} \|\mathbf{A}\mathbf{x} - \mathbf{b}\|_2^2 + \beta(\sum_s \|\mathbf{E}_s \mathbf{x} - \mathbf{D}\boldsymbol{\alpha}_s\|_2^2 + \sum_s v_s \|\boldsymbol{\alpha}_s\|_0)$$

其中 \mathbf{A} 是系统矩阵， \mathbf{x} 是图像最优解， \mathbf{b} 是投影数据测量值， β 是正则参数， \mathbf{E}_s 是可用来提取图像块的矩阵， \mathbf{D} 是过完备的字典， $\boldsymbol{\alpha}_s$ 是稀疏系数

■ 提出方法

在正则项中引入线性结构算子 S ，在保持图像全局质量的同时，增强图像局部质量。

$$\min_{\mathbf{x}, \boldsymbol{\alpha}_s} \|\mathbf{A}\mathbf{x} - \mathbf{b}\|_2^2 + \beta(\sum_s (\|\mathbf{E}_s \mathbf{x} - \mathbf{D}\boldsymbol{\alpha}_s\|_2^2 + \alpha \|\mathbf{S}(\mathbf{E}_s \mathbf{x} - \mathbf{D}\boldsymbol{\alpha}_s)\|_2^2) + \sum_s v_s \|\boldsymbol{\alpha}_s\|_0)$$

基于增强图像局部质量的迭代重建算法

其中当同时引入梯度算子和拉普拉斯算子时，可简化推导为一个高斯平滑算子 h 。

$$\min_{\mathbf{x}, \boldsymbol{\alpha}_s} \|\mathbf{A}\mathbf{x} - \mathbf{b}\|_2^2 + \beta(\sum_s \|\underline{h} \otimes (\mathbf{E}_s \mathbf{x} - \mathbf{D}\boldsymbol{\alpha}_s)\|_2^2 + \sum_s v_s \|\boldsymbol{\alpha}_s\|_0)$$
